

A Must-Have California Native Plant!

Blue Oak

Quercus douglasii

Description: **Blue Oaks** are medium-sized trees that grow to be 50-82 feet tall. As they drop their leaves in the fall, they nourish the soil and provide shelter for caterpillars.

Light: Full Sun / Part Shade

270 species of butterflies and moths can lay eggs on this plant.

Fun Fact: *“Oaks support more life forms and more fascinating interactions than any other genus in North America.” Doug Tallamy*

Featured Moth: The colorful **Elegant Sheep Moth** is often mistaken for a butterfly, as it flies during the day. Its caterpillar form is equally striking, and a valuable food source for birds.

Keystone Plant: This California native is a “must have” (host) plant for caterpillars, which, in turn, are the “must have” food for baby birds.
