

**A Must-Have California Native Plant!**

# Coast Live Oak

*Quercus agrifolia*

**Description:** Coast Live Oak is a beautiful evergreen oak that grows predominantly west of the central valleys and can reach 30-80 feet tall.

**Light:** Full Sun / Part Shade

**270** species of butterflies and moths can lay eggs on this plant.

**Fun Fact:** *“Oaks support more life forms and more fascinating interactions than any other genus in North America.” Doug Tallamy*

**Featured Butterfly:** In its caterpillar stage, the elegant **California Sister** dines exclusively on oaks and is a vital food source for many species of birds.

**Keystone Plant:** This California native is a “must have” (host) plant for caterpillars, which, in turn, are the “must have” food for baby birds.
